11. Prop 13: Split roll *California residents, registered voters*

In 1978, California voters approved California's Proposition 13. Under Prop 13, residential and commercial properties are not reappraised each year to keep up with current market value. Instead, any increase in the taxable value of the property can be no more than 2 percent per year, as long as the same owner has the property. When a property is sold, the new owner is taxed on the full current value of the property in that year. From that new market value, the 2 percent cap then limits tax increases every year after that.

Some lawmakers have suggested changing Prop 13 so that the tax cap is removed for commercial properties only. This would let all commercial property taxes increase along with market value each year, not just when a business property is sold to a new owner.

Opponents of this plan are concerned about the effects of higher property taxes on businesses in California. Supporters say that higher taxes on commercial property would reduce the need to increase taxes on individuals. These additional property taxes would go directly to California cities, counties, and school districts.

With this plan, sometimes called a "split roll," the tax cap would be left in place for homeowners.

Do you support this type of proposed change to the commercial property part of Prop 13?

Hoover Institution Golden State Poll

Fieldwork by YouGov
April 28 - May 4, 2017

Sponsorship	The Hoover Institution at Stanford University
Fieldwork	YouGov
Interviewing dates	April 28 - May 4, 2017
Target population	California residents, aged 18 and over
Sampling method	Respondents were selected from YouGov's opt-in Internet panel using sample matching. The sample was matched on gender, age, race, education, party identification, ideology, and political interest to a frame constructed by stratified sampling from the 2010 American Community Survey (ACS). Data on voter registration status and turnout were matched to this frame using the November 2010 Current Population Survey. Data on interest in politics and party identification were then matched to this frame from the 2007 Pew Religious Life Survey.
Weighting	The sample was weighted using propensity scores based on age, gender, race/ethnicity, years of education, and ideology. The weights range from 0 to 7.11, with a mean of one and a standard deviation of 1.21.
Number of respondents	1700
Margin of error	+/- 3.75% for the full weighted sample
Survey mode	Web-based interviews
Questions not reported	5 questions reported
